OEG Enviro-Pak's 4000HM waste compactor:  
A smart solution for medical waste management

Medical waste is a serious environmental and health hazard that requires proper disposal and treatment. That's why OEG Enviro-Pak has developed the 4000 Hazardous Medical (HM) waste compactor, a state-of-the-art unit that can handle any type of medical waste with ease and safety.

The 4000HM waste compactor is designed to compress medical waste into compact pales that can fit into UN hazardous waste transportation boxes. Unlike other compactors, the 4000HM can achieve a remarkable compaction ratio of 88 pales per box, which is almost five times higher than the average compactor. This means that you can reduce the number of boxes needed for your waste by 80%, saving you a lot of space, time, and money.

# C-series compactors

OEG Enviro-Pak's C-series compactors are designed to function as both a compactor and a baler, featuring a hydraulic operated roll back top for easy loading and unloading. The C-series compactors compact all types of non-hazardous waste into the compactor bag.

# Recycle the Gulf®

Designed to reduce and recycle waste generated offshore.

Protecting the environment.

Enhancing corporate responsibility.

Supporting local communities.

## About the program

OEG Offshore's Recycle the Gulf is an environmental program designed to reduce and recycle waste generated offshore in the Gulf of Mexico. Utilizing OEG's Enviro-Pak waste compactor product line, recyclables can be collected, sorted and compacted on the rig.

All recyclables are donated to a Louisiana-based partner, The Arc of Acadiana, an organization dedicated to improving the lives of people with developmental disabilities.

## Benefits of the program

Participating in the program assists companies with MARPOL 73/78 and ISO 14001 compliance and allows socially responsible companies to build a positive reputation and increase financial performance.

To date, Recycle the Gulf program participants have recycled 12+ million pounds of offshore waste in our EPA Gulf Guardian Award winning program (2004).

An environmentally conscious supply chain is valued and recognized by stakeholders now more than ever; the program allows companies to enhance their corporate responsibility.

The program supports the local community by generating revenue for The Arc of Acadiana, while providing disabled individuals with jobs and purpose.

Offshore waste is sorted by recycling center employees who separate and repackage recyclables. Recyclables are then sold, providing revenue for The Arc of Acadiana.

## How Recycle the Gulf® works

Our environmental program provides many benefits for participating companies and OEG makes it simple to take part.

- OEG'S ENVIRO-PAK COMPACTORS ARE AVAILABLE FOR RENT OR PURCHASE TO RIGS OPERATING IN THE GULF OF MEXICO
- RECYCLABLES ARE SORTED AND COMPACTED ON THE RIG, THEN SHIPPED IN ECO-FRIENDLY BAGS TO THE RIG'S DOCK FACILITY
- SPECIALTY CONTAINERS LABELED 'RECYCLED WASTE ONLY' LOCATED AT THE RIG'S DOCK FACILITY STORE INCOMING ECO-FRIENDLY BAGS OF RECYCLABLES FROM EACH PARTICIPATING RIG
- OEG MANAGES THE LOGISTICS OF COLLECTING AND EXCHANGING THE BAGS, AS WELL AS DELIVERING THEM TO THE ARC OF ACADIANA
- CONTRIBUTIONS ARE ACCOUNTED FOR BY COMPANY AND MONTHLY REPORTS ARE POSTED TO AN ONLINE CUSTOMER PORTAL
- THE ARC OF ACADIANA EMPLOYEES GRADE THE RECYCLE MATERIALS
- ALL REVENUE FROM RECYCLED MATERIALS IS DONATED TO THE ARC OF ACADIANA
